Project Overview

The Personal Portfolio Website is a modern and responsive digital resume created to showcase Pratik Vijay Shelar's skills, projects, achievements, education, certifications, resume, and professional contact details. The website works as a personal branding platform where recruiters, mentors, and clients can quickly understand the developer's profile, technical strengths, academic background, and project experience.

The website is built as a static frontend project using HTML, CSS, and JavaScript. It includes interactive UI elements such as animated hero content, theme switching, responsive navigation, project cards, certificate previews, contact form validation, and resume download support.

Primary Purpose

To present a professional online portfolio and improve visibility for internship, freelancing, and web development opportunities.

Target Users

Recruiters, HR teams, clients, faculty members, mentors, and professional contacts.

Learning Objectives

- Build responsive web interfaces for desktop, tablet, and mobile devices.
- Create a professional portfolio website with a strong personal brand.
- Apply modern UI/UX design principles in layout, spacing, typography, and interaction.
- Organize and manage the project using Git and GitHub.
- Deploy a static website using Netlify.
- Improve frontend development skills through real project implementation.

Final Deliverables

Deliverable	Status	Implementation Details
Responsive Personal Portfolio Website	Completed	Includes mobile-friendly layout, responsive sections, navigation, and project showcase.
GitHub Repository	Completed	Source code is available at the public GitHub repository.
Live Netlify Deployment	Completed	Portfolio is deployed and accessible through the Netlify live URL.
Resume Download Feature	Completed	Resume PDF is stored in the assets folder and linked from the hero section.
Contact Form	Completed	Contact form UI includes JavaScript-based email validation and user feedback.
Skills and Projects Showcase	Completed	Technical skills, tools, featured projects, screenshots, and project links are displayed.
Professional Documentation	Completed	This PDF document explains the project plan, implementation, deliverables, and deployment.

Technology Stack

Category	Technology	Purpose
Structure	HTML5	Creates the semantic layout and website sections.
Styling	CSS3	Handles responsive design, cards, animations, themes, and visual polish.
Interactivity	JavaScript	Controls navigation behavior, theme toggle, counters, form validation, and UI effects.
Visual Effects	Three.js and CSS Animations	Adds modern background visuals, reveal animations, and interactive experience.
Icons	Font Awesome	Provides clean icons for navigation, buttons, skills, and contact links.
Version Control	Git and GitHub	Manages source code, project history, and public repository sharing.
Deployment	Netlify	Hosts the static portfolio website online.

Website Sections

- **Navigation Bar:** Responsive menu with links to major portfolio sections.
- **Home / Hero Section:** Introduction, profile image, role description, resume download, contact CTA, and project stats.
- **About Me:** Professional summary, academic background, interests, and internship focus.
- **Academics:** Education details with scorecard evidence for SSC, HSC, and B.Tech progress.
- **Participation and Journey:** Learning areas including frontend, backend, databases, DSA, and AI fundamentals.
- **Achievements:** DSA progress, GitHub achievements, full-stack project work, and documentation practice.
- **Projects:** Featured project cards with screenshots, technology tags, GitHub links, and live demo links where available.
- **Certificates:** Certificate gallery for Web Development, Frontend, MongoDB, MySQL, C++, and AI/ML.
- **Skills:** Technical, academic, tooling, and soft skills grouped in a clean skills matrix.

- **Blog and Testimonials:** Additional content that strengthens the personal brand and learning journey.
- **Contact:** Email, GitHub, LinkedIn, Instagram, and contact form UI.
- **Footer:** Closing message, live clock, quote line, and personal branding information.

Sample Screenshots

The following screenshots show the main pages and screens created for the portfolio website. These images are included in the project assets and demonstrate the desktop layout, mobile responsiveness, project showcase, academic proof, certificates, skills, blog, testimonials, and contact flow.

Desktop Home Page

Hero section with profile introduction, action buttons, quick stats, and profile panel.

Mobile Responsive View

Mobile optimized layout with compact navigation and responsive content stacking.

About Section

Career objective, student details, internship focus, and personal profile information.

Academics Section

Education details, CGPA, institution information, and scorecard evidence links.

Projects Section

Featured project cards with screenshots, descriptions, technology tags, and links.

Certificates Section

Certificate gallery showing completed learning tracks and technical certifications.

Skills Section

Grouped skill cards for languages, frontend, backend, databases, tools, and soft skills.

Contact Section

Contact form UI, email, GitHub, LinkedIn, Instagram, and connection links.

Day-Wise Development Plan

Day 1: Project Planning, Setup and Home Page Development

Objective: Set up the project structure and create the core layout of the portfolio website.

Tasks Completed:

- Created the project folder structure with separate folders for CSS, JavaScript, images, resume, and documents.
- Initialized the Git repository and connected the project with GitHub.
- Designed the website structure and page layout.
- Created a responsive navigation bar.
- Developed the Home / Hero section with profile introduction, CTA buttons, resume download, and profile image.
- Created the About Me section with profile summary and academic details.
- Implemented the initial responsive design.

Deliverables: Project structure, navigation bar, home section, about section, and initial responsive layout.

Skills Learned: HTML structure, CSS layout, responsive design basics, and GitHub repository management.

Day 2: Skills and Projects Showcase Development

Objective: Build sections that highlight technical expertise and completed projects.

Tasks Completed:

- Created the Skills section with grouped skill categories.
- Designed skill cards and tags for programming languages, frontend, backend, databases, tools, and soft skills.
- Created the Projects section with responsive project cards.
- Added project screenshots, descriptions, technology stacks, GitHub links, and live demo links.
- Implemented hover effects, reveal animations, and interactive card behavior.

Deliverables: Skills section, projects section, interactive cards, and responsive project showcase.

Skills Learned: CSS animations, Flexbox/Grid layouts, card-based UI design, and interface enhancement.

Day 3: Resume, Contact and Social Media Integration

Objective: Enable visitors to connect with the developer and access professional documents.

Tasks Completed:

- Added the downloadable resume feature using a local PDF file.
- Created certificate and achievement sections.
- Designed the contact form with name, email, and message fields.
- Added JavaScript email validation and form feedback message.
- Integrated social media and professional links including GitHub, LinkedIn, Instagram, and email.
- Added a footer section with live clock and quote display.
- Improved accessibility using semantic sections, labels, alt text, and ARIA attributes.

Deliverables: Resume section, contact form, social media links, certificate area, achievements, and footer.

Skills Learned: Form handling, JavaScript validation, external link integration, and user interaction design.

Day 4: Testing, Optimization and Netlify Deployment

Objective: Prepare the website for production and deploy it online.

Tasks Completed:

- Reviewed all website sections and fixed UI consistency issues.
- Tested responsiveness across desktop and mobile screen sizes.
- Checked browser compatibility for modern browsers.
- Optimized images and organized assets inside the project folders.
- Pushed the final source code to GitHub.
- Deployed the static website on Netlify.
- Generated the live portfolio URL.
- Created README and PDF project documentation.

Deliverables: Fully functional website, updated GitHub repository, Netlify deployment, live website link, and project documentation.

Skills Learned: Website optimization, deployment workflow, performance testing, and production-ready development.

Featured Projects Included

Project	Description	Technologies
Maintenance Ticket Management System	Role-based ticket management application with ticket creation, assignment, status tracking, comments, uploads, authentication, and protected routes.	React, Node.js, Express.js, MySQL, Prisma, JWT
WanderLust Stays	Travel listing platform with authentication, property listings, owner actions, reviews, image upload flow, maps, and deployment.	MongoDB, Express.js, React, Node.js, Render
React Weather App	Weather dashboard with API-based search, dynamic visuals, temperature, humidity, loading states, and error handling.	React, Vite, Material UI, OpenWeather API
Mini WhatsApp CRUD Chat App	Server-rendered CRUD chat application with routes, MongoDB persistence, EJS views, and timestamps.	Node.js, Express.js, MongoDB, EJS
Currency Converter	API-based currency converter with exchange rates, country flags, swap logic, dark mode, and error states.	HTML5, CSS3, JavaScript, API

Repository Structure

Path	Purpose
index.html	Main portfolio webpage containing all content sections.
css/style.css	Main stylesheet for layout, responsive design, themes, and animations.
js/main.js	Core JavaScript for navigation, theme toggle, form validation, counters, clock, and print action.
js/animations.js	Animation and visual interaction logic.
js/components.js	Reusable component-level JavaScript behavior.
assets/images	Profile image, project screenshots, certificate images, institution images, and README previews.
assets/docs	Resume PDF and academic scorecard PDFs.
README.md	GitHub documentation for project overview, setup, features, and links.

Testing and Quality Checks

- Checked navigation links and smooth scrolling behavior.
- Verified resume download from the hero section.
- Tested contact form validation with valid and invalid email formats.
- Reviewed responsive layout across mobile, tablet, and desktop screen sizes.
- Confirmed project screenshots, certificates, and profile image paths.
- Checked external links for GitHub, LinkedIn, Instagram, email, live project, and live portfolio.
- Reviewed visual consistency, spacing, readable typography, and section hierarchy.

Submission Link Verification

Link	Verification Result	Checked On
https://lively-starlight-dffa3f.netlify.app/	Working, HTTP 200, portfolio title loaded successfully.	10 June 2026
https://github.com/Pratik-Ghrcemp/pratik-shelar-portfolio	Working, HTTP 200, public GitHub repository page loaded successfully.	10 June 2026

Deployment Details

The portfolio is a static frontend website, so no build command is required. The project root is used as the publish directory, and **index.html** acts as the entry file. The final website was deployed on Netlify and connected with the public GitHub repository.

Platform	Netlify
Build Command	Not required
Publish Directory	Project root
Entry File	index.html
Live Portfolio	https://lively-starlight-dffa3f.netlify.app/

Conclusion

The Personal Portfolio Website successfully meets the project requirements by presenting a responsive, professional, and interactive web presence for Pratik Vijay Shelar. It includes all core deliverables such as home, about, skills, projects, resume download, certifications, achievements, contact form, social links, GitHub repository, and Netlify deployment.

This project demonstrates practical frontend development skills, project organization, UI/UX design understanding, GitHub workflow, and deployment knowledge. It can be used as a digital resume and personal branding platform for future internships, job applications, client work, and academic presentation.
